# Lode Runner™

from Brøderbund

ariolasoft 

The famous addictive action program  
plus game generator for the  
**COMMODORE 64**  
U.S. No. 1 HIT

# Lode Runner™

by Doug Smith and Dane Bigham

## Spellbinding Action!

You are a highly trained Galactic commando deep in enemy territory. Power hungry leaders of the repressive Bungeling Empire have stolen a fortune in gold from the peace loving people, and you've just discovered their secret underground treasury. Your goal? To recover every last ingot of Bungeling booty. You'll be running, jumping, and climbing heroically, solving perplexing puzzles, and drilling passage-ways through stone floors and barriers using your laser drill pistol. You'll need more than fleet feet and good looks to get through this mission alive. You'll need your quick wits and brains!

## Create Your Own Games!

Lode Runner is more than a fast-action game. It's a game generator that lets you design your own puzzles and scenes! You can move, add, and take away countless ladders, floors, trap doors, crossbars, gold chests, and Bungeling enemies. It's easy, and there's no end to the variations, challenge and fun!

- An action style game with 150 different puzzles and scenes
- Design your own puzzles! No programming knowledge required!
- Keyboard or joystick controlled

Apple Screen

# Lode Runner™

## To start

Turn on the disk drive, turn on the computer and insert the disk. Type LOAD "LH", B and then press RETURN. When loaded a self-playing demo will start. Plug your joystick into Port 2.

## To leave demo

Push joystick button or any key (except RETURN) to leave demo and start game action.

## Player control

**Joystick control:** CTRL - J sets game to joystick control. Player moves up/down/left/right according to joystick movements. Press the joystick button to dig.

**Keyboard control:** CTRL - K sets game to keyboard control.  
up = I dig right = O  
down = J dig left = U  
left = K right = L

## Game play

To complete a level, collect all the gold chests. Then climb to the top of the screen to enter the next level. You will gain bonus points and earn an extra life for each level you complete. You start with 5 lives.

Use your laser drill pistol to drill pits and passageways through fissured bricks only, not through solid surfaces. Holes must be drilled all the way through to be effective. If a

Bungeling guard falls into a pit and gets stuck, it will be safe (for a moment) for you to run over him; also, he will release any gold he is carrying. Any holes that you've drilled will fill in again after a period of time, and guards caught in them when they refill will die and be replenished by new guards at the top of the screen. Be careful! Guards can climb out of pits that do not close up around them. Your player, however, cannot climb out of pits and will die if trapped in a pit that is only a single brick wide.

Gold chests carried by enemy guards cease to be visible. If you have picked up all the visible gold on the screen and the ladder leading to the next level has not yet appeared or you cannot reach the next level by climbing to the highest part of the screen, one or more of the guards is still carrying gold. You must trap the guards in a pit to pick up their gold. If an enemy carrying gold falls into a 'dead end' that he and you are unable to leave, you will not be able to get that gold chest safely. If stuck in a 'dead end', press CTRL - A to continue (see below).

## Scoring

Completing a level - 1500 points  
Picking up a gold chest - 250  
Trapping an enemy - 75  
Enemy dying in a hole - 75

If you achieve a new high score, a high score list will appear at the end of the game. Type in your initials then press RETURN. You can

use the left and right cursor keys to make corrections before pressing RETURN.

## Special keys

**CTRL - A** - aborts man if stuck without means of death or escape  
**RETURN** - in demo, displays current high score list  
**CTRL - R** - terminates current game (enter demo mode)  
- slows down overall game speed (press repeatedly)  
+ - speeds up overall game speed (press repeatedly)  
**RUN/STOP** - freezes action until RUN/STOP hit again  
**CTRL - O** - toggles direction of dig (forward or behind runner)  
**CTRL - Z** - toggles in-/in-out scene change feature

## Cheat keys

**CTRL - U** - advances a level  
**CTRL - F** - adds additional lives/players

Using either of these 'cheat keys' forfeits your high score attempt for that game. So does beginning a session at any level other than the first (level 001).

## Game Generator

Instructions on using the Game Generator to design your own 'Lode Runner' games are included inside this pack.

# ***Lode Runner***™

HOW TO MAKE YOUR OWN GAMES:  
SUMMARY

## Making Your Own Games

The Game Generator ("Edit mode") lets you design, move, erase, playtest, and save to disk your own unique Lode Runner games—with no programming knowledge required! You may also use this editor to access directly (then play) any of Lode Runner's 150 different game screens, as well as to erase high scores and prepare new data disks for use in saving your own game creations. Don't panic. It's all remarkably easy.

The following chart summarizes the steps involved in making your own games. Detailed instructions are given in the sections that follow.

## HOW TO MAKE YOUR OWN GAMES: SUMMARY

WHAT TO DO	HOW TO DO IT
1. Enter "Edit Mode"	Press CTRL - E from demo mode (or CTRL - R then CTRL - E from game in progress)
2. Put "Initialized" data disk into disk drive	(See "Initializing your Data Disk")
3. Design Your Game	Use I - J - K - M keys to move cursor; Use 0 - 9 to make shapes
4. Save Your Game	Press CTRL - S
5. Play Your Game	Press CTRL - Q to "Quit" game generator; Press P (and RETURN) to "Play"

### 1. ENTERING EDIT MODE:

First you must enter Edit mode. If you are playing a game, press CTRL - R to end the game, then press CTRL - E (for "Edit"). If you are starting from the self-playing demo mode, simply press CTRL - E. The Lode Runner Board Editor screen will appear, allowing you to enter the following single-key editing commands:

E (for "Edit")	I (for "Initialize")	M (for "Move")
P (for "Play")	C (for "Clear")	S (for "Score")

These commands are explained in the instructions below.

### 2. INITIALIZING YOUR DATA DISK:

Before designing your first game board, you must prepare a Lode Runner data disk on which to save your creations. This is a two-step process. First, you must initialize a blank data disk by normal means as outlined in your disk drive manual. Second, you must customise the initialized disk for Lode Runner use in the following way: a) With the "initialized" disk on hand, restart your Lode Runner disk and enter Edit mode. b) Press I for "Initialize". c) Remove your Lode Runner disk and insert the normally initialized data disk into the drive. Press Y (for "Yes") in response to the screen question ("Are you sure?"). d) When the disk drive stops whirring, your data disk is ready to use, and you can use it to create and save 150 different boards without reinitializing. Note: Use this "I" command with caution as it erases everything on the disk! By the way, the program will prevent you from initializing (and erasing) your Lode Runner master disk.

### 3. DESIGNING YOUR OWN GAME BOARDS:

Now that you have an initialized data disk, you are ready to create your own games. From the Lode Runner Board Editor screen, press E (for "Edit"). You will be asked to type in the number of the game board you want to work on (001-150). For your first board, use 001. Type in the number, then press RETURN. The selected screen will appear.

**NOTE:** Whenever you type in board numbers in response to prompts in the Board Editor, you must type the entire three digit number before pressing RETURN (i.e. 3 must be entered as 003, 47 as 047, etc.) You may use the left and right cursor keys to skip over digits or to make corrections before pressing RETURN.

The process of designing your own boards is simple. There are nine basic shapes that make up all Lode Runner game boards. Each of these shapes is controlled by one of nine number keys (1-9). Zero (0) makes a blank. To design a game screen, you simply move the cursor around the screen with the cursor movement keys and place the shapes where you want them by pressing the appropriate number keys.

Remember: You **MUST** have an initialized data disk on hand if you are going to save your creations to disk; you cannot use the Lode Runner master disk for this purpose.

**IMPORTANT: SEE TIPS ON SAVING YOUR CREATIONS BELOW. YOU MUST SAVE YOUR GAME EACH TIME YOU QUIT THE GAME GENERATOR, EVEN TO PLAYTEST.**

**CURSOR MOVEMENT CONTROLS:**

I = up a line  
M = down a line

J = left a character  
K = right a character

**LODE RUNNER SHAPES:**

 0=blank

 1=diggable floor

 2=undiggable floor

 3=ladder

 4=hand over hand bar

 5=trap door

 6=ladder that appears  
after getting all gold

 7=gold chest

 8=enemy

 9=player

There are a few practical limitations regarding the number of objects you can use:

**YOU MUST HAVE ONE "PLAYER" ON YOUR GAME BOARD FOR YOUR GAME TO BE PLAYABLE - i.e. NO MORE, NO LESS THAN ONE LODE RUNNER COMMANDO (SHAPE NO. 9) MUST BE INCLUDED IN YOUR GAME BOARD DESIGN. OTHERWISE, WHEN YOU TRY PLAYING YOUR GAME, YOU WILL BE RETURNED TO DEMO MODE.**

You may have 1, 2, 3, 4, or 5 enemy guards (shape no. 8) on a board. No more than five, no less than one.

The other shapes (1-7) also have numerical limits, though you are not likely to exceed them. If you do, the program will simply ignore the excess.

From within the game generator, you may also view adjacent Lode Runner boards by pressing CTRL - F (for forward) or CTRL - B (for back).

**4. SAVING YOUR CREATIONS:**

When you finish designing a screen or when you want to play test it or take a break...

**YOU MUST SAVE THE BOARD ON YOUR INITIALIZED DATA DISK BY TYPING CTRL - S (for "Save"). IF YOU DO NOT SAVE THE GAME ON A DATA DISK, THE BOARD WILL BE LOST WHEN YOU EXIT THE GAME GENERATOR!**

**PLAYING YOUR GAME:**

After you have saved a board (using CTRL - S), type CTRL - Q (for "Quit"). CTRL - Q returns you to the Board Editor screen. From there simply type P (for "Play") and RETURN to play the game board you've created.

**OTHER EDIT MODE COMMANDS:**

The other single-key commands available from the Board Editor (CTRL - E screen) are as follows:

**P (Play)** - Lets you select any game board you desire. After pressing P, you will be asked to enter the three digit number of the level you wish to play (001-150). Type in the number and press RETURN. Note: If you attempt to enter P (Play) mode using a disk that has no level 001, control is returned to demo mode. To resolve this, enter Edit mode and create a first level.

**S (Score)** - Clears high scores from the disk; you start high scores over again with a clean slate.

**C (Clear)**—Erases a game board from the disk (blanks the board).

**M (Move)**—Copies a board to another level number.

**Note:** you cannot Clear, Move, or Edit the game boards on the master disk. These functions are available for use with a data disk only.

#### **TROUBLESHOOTING:**

Whenever there is a disk error, the Game will return to demo mode. If this happens, check to see if the Lode Runner master disk is in the disk drive and if the drive door is shut. If this doesn't resolve the problem, check to see if you have a level 001 on your game disk. If not, create one.

Playtest your own board creations to make sure they are beatable. If you want to refine or improve them, simply return to the editor.

Remember, as mentioned in "Game Play", if a player becomes stuck in a 'dead end' with no way out, press CTRL - A to Sacrifice that 'life' and to resume play.
